

IN THE CLAIMS

I claim:

1-8 (CANCELLED)

9. (CURRENTLY AMENDED) A skid wrap roller for holding a spool of wrap comprising:

a straight linear pole, having a first end and a second end;

a sleeve, disposed on said pole toward said first end of said pole via a first set of holes;

a plug, disposed on said pole toward said second end of said pole, said plug having only one open end;

a plate, disposed on said pole toward said second end of said pole, said pole disposed through said plate so that said pole is on both sides of said plate; and

a second set of holes in said sleeve arranged to receive a member perpendicular to said pole.

10. (CURRENTLY AMENDED) A skid wrap roller for holding a spool of wrap comprising:

a straight linear pole, having a first end and a second end;

a sleeve, disposed on said pole toward said first end of said pole via a first set of holes;

a plug, disposed on said pole toward said second end of said pole, said plug having only one open end;

a plate, disposed on said pole toward said second end of said pole, said pole disposed through said plate so that said pole is on both sides of said plate; and

a second set of holes along said pole arranged to receive a member perpendicular to said pole.

11. (CURRENTLY AMENDED) The apparatus according to claim 10, wherein said second set of holes along said pole correspond to said first set of holes in said sleeve.

12-14. (CANCELLED)

15. (CURRENTLY AMENDED) A skid wrap roller for holding a spool of wrap comprising:

a straight linear pole, having a first end and a second end;

a sleeve, disposed on said pole toward said first end of said pole via a first set of holes;

a plug, disposed on said pole toward said second end of said pole, said plug having only one open end;

a plate, disposed on said pole toward said second end of said pole, said pole disposed through said plate so that said pole is on both sides of said plate; and

a brake ~~assay~~ assembly disposed toward said first end of ~~on~~ said pole.

16. (CURRENTLY AMENDED) The apparatus according to claim 15, wherein said brake ~~assay~~ assembly communicates with the spool.
